DETAILED ACTION

Claim Objections

Claim 1 is objected to because of the following informalities: line 4, the phrase "the measurement signals" lacks antecedent basis and at line 5, the phrase "the flip chip type" lacks antecedent basis. Appropriate correction is required.

Claim 1 is objected to because of the following informalities: line 8, it is unclear what is meant by the phrase "optionally further elements". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 - 19 rejected under 35 U.S.C. 102(b) as being anticipated by Davidson et al. (5,414,355).

As to claims 1 – 14, Davidson et al. (hereinafter Davidson) discloses a magnetic sensor comprising an integrated circuit, connectable preferably via an electrical cable, with a measured value transducer array and an electronic circuit arrangement for processing the measurement signals, characterized in that a housingless integrated circuit (38) of the flip-chip type is mounted on a basic component (10) provided with conductor tracks (12, 14, 16) and embodied as an MID (Molded Interconnect Device)

Art Unit: 2862

component and is enclosed jointly with the conductor tracks (28, 30) by a diamagnetic or paramagnetic covering (50).

As to claims 15 – 19, Davidson et al. (hereinafter Davidson) discloses a magnetic sensor comprising an integrated circuit, connectable preferably via an electrical cable, with a measured value transducer array and an electronic circuit arrangement for processing the measurement signals, characterized in that by casting or injection molding of thermoplastic, a basic component (10, fig. 1) is produced; that conductor tracks (12, 14, 16) for the connection to a housingless integrated circuit (38) are mounted on the basic component (10); that the integrated circuit (38) is joined in wireless fashion by the flip-chip technique to the conductor tracks (12, 14, 16), and the arrangement is then sheathed at least partly with an outer encapsulation (50) in a further casting or injection molding process.
